

RUG.WORLD

Stake your NFTs. Earn from every trade.

The launchpad that gives royalties back to the people who actually hold.

SOLANA

METAPLEX CORE

OPEN TO EVERYONE

NFTs used to connect people. Then it stopped.

NFT communities were the best place to meet people who shared your taste, your risk appetite, your internet. Real friendships formed. Real crews built real things. But the incentive model killed it.

Creators collected royalties on every secondary trade while the people holding, building the community, and keeping the project alive got nothing. When the hype faded, creators walked away with a recurring income stream. Holders were left with a JPEG and a dead Discord.

New communities stopped forming. Veteran collectors burned out. The door that NFTs opened for social connection quietly closed.

The old model in one line

Creator gets paid on every trade. Holder gets nothing. Community decays.

What if royalties went to holders?

Rug.World reverses the royalty flow. **10% royalty on every secondary sale. All of it goes to people who stake their NFTs.** Not the creator. Not the platform. The community.

The creator already earned from the mint. That is their payday. After that, the value that secondary trading generates belongs to the people who stayed.

■ **Stakers** receive 100% of the 10% royalty

■ **Creator** receives 0% royalty (earns from mint sales)

If a creator wants ongoing income from their own collection, they can mint NFTs for themselves and stake them. They earn like everyone else. Same rules, same skin in the game.

10 trades pay for 1 NFT.

Here is a simple example. A collection with 1,000 NFTs at a 1 SOL floor. Every secondary sale generates 0.1 SOL in royalties for stakers.

TRADES	ROYALTY GENERATED	PER STAKED NFT	ROI IF YOU MINTED AT 1 SOL
10	1.0 SOL	0.001 SOL	0.1%
100	10 SOL	0.01 SOL	1%
1,000	100 SOL	0.1 SOL	10%
10,000	1,000 SOL	1.0 SOL	100%

10,000 trades = your NFT paid for itself.

In an active collection, that can happen in weeks. And after that? Every single trade is pure profit for stakers. The longer you hold, the more you earn. This is what holding should have always been.

Holders used to hate high royalties. Now they want them.

Remember when 7.5% or 10% royalties felt like a tax? Holders complained because all that money went to the creator while they held the bag. They were right to be frustrated.

But when that same 10% goes to the people holding? It's not a tax anymore. It's income. **The higher the royalty, the more holders earn.** The conversation flips from "skip royalties" to "enforce them, they feed the pool I'm earning from."

Old model

High royalty = more money leaving the community into the creator's wallet. Traders avoid marketplaces that enforce royalties. Community shrinks.

Rug.World model

High royalty = more money flowing back to holders. Traders who pay royalties are feeding their own staking pool. Community grows.

Mint price is your payday. And it's enough.

A 5,000-piece collection at 0.5 SOL is 2,500 SOL from mint alone. That's real money. Enough to build, enough to hire, enough to deliver.

If you want ongoing income, do what your holders do: **keep some of your own NFTs and stake them.** You earn proportionally from the same pool. You're not above the community. You're part of it. Same incentives, same upside, same skin in the game.

This changes the creator-holder relationship. You're not extracting from them. You're building alongside them. And that's the kind of project people actually want to stick with.

Creator who wants ongoing income

Pre-mint 500 NFTs to your wallet (free, only network fees). Stake all 500. Now you earn 10% of royalties ($500/5000 = 10\%$ of the pool) from every secondary trade. If your collection does well, you do well. If it doesn't, you don't get a free ride.

NFTs were a door. We want to reopen it.

The best thing about the 2021-2022 NFT wave wasn't the art or the flips. It was the people. Communities that formed around collections created real friendships, real collaborations, real culture. Most of the people you know in web3 today? You probably met them through an NFT community.

That stopped happening. New communities barely form anymore. The builders who used to grind for communities moved on. The incentive to hold died when holding meant watching a creator collect fees while your bag lost value.

Rug.World exists to bring that energy back. When holding pays, people hold. When people hold, communities stay alive. When communities stay alive, new ones form around them. The door reopens.

HOLD = EARN

Every trade feeds your wallet.
Holding is no longer passive.

CONNECT

When people have a reason
to stay, real relationships form
again.

BUILD

Aligned incentives attract
builders who actually deliver.

How Rug.World sustains itself.

Two small cuts per mint. No cut from secondary royalties. The community pool is untouched.

ADDED ON TOP OF MINT

+2.5%

Buyer pays the mint price plus a 2.5% fee.

CUT FROM CREATOR'S SHARE

-2.5%

Of the mint price, 2.5% goes to Rug.World instead of the creator.

EXAMPLE · 1 SOL MINT

Buyer pays	1.025 SOL	mint price + 2.5%
Creator receives	0.975 SOL	mint price - 2.5%
Rug.World	0.050 SOL	covers hosting, uploads, ops

Anyone can launch. Four steps.

No approvals needed. No waiting list. Open your wallet, build your collection, go live.

01

Upload traits

Add layers (background, body, eyes...). Upload trait PNGs, set rarity weights.

02

Generate

Art Studio produces thousands of unique NFTs. Every piece gets a unique DNA hash.

03

Set phases

OG, Whitelist, Public. Set prices, limits, start and end times.

04

Launch

Pay 1 SOL. Metadata pins to Arweave. Collection goes live on the launchpad.

Dead project? Someone else takes over.

If a team abandons their collection, anyone from the community can step up, pitch a plan to Rug.World, and take over as the new lead. Art stays. Community stays. Royalties keep flowing. Just with someone who actually shows up.

The whole model.

PARAMETER	VALUE	NOTES
Network	Solana	Fast, cheap, proven for NFTs
NFT standard	Metaplex Core	Native royalty enforcement + freeze plugins
Access	Permissionless	Anyone can launch a collection
Launch fee	1 SOL	One-time, paid by the creator
Platform fee (buyer)	+2.5% on mint	Added on top of mint price
Platform fee (creator)	-2.5% on mint	Deducted from creator's share
Secondary royalty	10%	100% to stakers, 0% to creator
Pre-mint for founder	Free	Only Metaplex fee (~0.012 SOL / NFT)
Creator royalty income	Stake	Mint and stake your own NFTs to earn like holders
Buyer experience	1 signature	Pay once, server handles the rest
Freeze on mint	Yes	FreezeDelegate plugin, admin-controlled
Abandoned projects	CT0	Community Takeover: new leader, same collection
Metadata hosting	Arweave	Permanent, server-funded via Irys

Hold. Stake. Earn.

Every trade rewards the people who believe in the project. That's how communities should work.
